Data Processing

Other Processing

After data was collected, all the questionnaires were sent to the KNBS headquarters for processing. The questionnaires were then sorted and edited ready for data capture.

The data entry was done using the Census and Survey Processing System (CSpro) version 4.0 software. The data entry screen was created with checks to ensure accurate data entry. A total of ten data entry personnel and support staff were engaged for the exercise.

The captured data was exported to the Statistical Package for Social Sciences (SPSS) for cleaning and analysis. The cleaned data was then weighted using application of inflation factors derived from the selection probabilities of the EAs and households. The results in this report are therefore based on the weighted data.
