Overview

ABSTRACT
Wajir County department of medical services, public health and sanitation in collaboration

with UNICEF and Save the Children successfully conducted Integrated Health and Nutrition

survey in Wajir North sub-county herein referred as agro-pastoral livelihood zone. The

overall objective was to estimate the prevalence of malnutrition among children 6 – 59 months

and women of reproductive age following a significant deterioration of nutrition status

observed in the SMART survey carried out in July 2017.

The survey applied a two stage cluster sampling using SMART methodology with the clusters

being selected using the probability proportional to population size (PPS). A total of 636 and

797 households and children respectively were reached. Overall plausibility check was

excellent at 2%.
