Overview

ABSTRACT
The Global Adult Tobacco Survey (GATS), a component of Global Tobacco Surveillance System (GTSS), is a global standard for systematically monitoring adult tobacco use and tracking key tobacco

control indicators. GATS is designed to produce national and sub-national estimates among adults across countries. The target population includes all non-institutionalized men and women 15 years of age or older who consider the country to be their usual place of residence. All members of the target population will be sampled from the household that is their usual place of residence.

GATS is intended to enhance the capacity of countries to design, implement and evaluate tobacco control interventions.

KIND OF DATA
Sample survey data [ssd]

UNITS OF ANALYSIS
Individual

Scope

NOTES
The GATS interview consists of two parts:

Tthe Household Questionnaire and the Individual Questionnaire.

The Household Questionnaire (household screening) and the Individual Questionnaire (individual interview) will be conducted using an electronic data collection device.

Data Collection Notes

The Kenya National Bureau of Statistics (KNBS) is the implementing agency of the Kenya 2014 GATS. KNBS is the principal agency of the government for collecting, analyzing and disseminating statistical data in Kenya. The Bureau is also the custodian of official statistical information, establish standards and also promote the use of best practices and methods in the production and dissemination of statistical information across the National Statistical System (NSS). The Bureau also maintains a database of all national surveys including National Population and Housing Censuses.

The iPAQ was use to collect the data at the feild

Data collection has been organized to be collected by 13 field data collection teams each comprising of: 1) 1 Supervisor 2) 4 Interviewers 3) 1 Driver 4) 1 KNBS officer who will guide the team to the selected cluster 5) 1 Village elder in whose area the cluster falls

Questionnaires

The GATS contains Household Questionnaire and Individual Questionnaire. These questionnaires are administered using an electronic data collection device.

Using the IPAQ to Manage Household Assignments and Input Data. Screening and Respondent Selection: The Household Questionnaire
Administering the Individual Questionnaire Transmitting Data Using SD CARDs

Supervision

Updating the Record of Calls
At the end of the interview, thank the respondent for spending time with you and for contributing to the success of this

important survey. After exiting the Individual Questionnaire, the iPAQ will automatically code the questionnaire as complete (code 400) and display the Select Case screen. If you were not able to complete the Individual Questionnaire, the iPAQ will prompt you to update the Record of Calls with the appropriate result code. (Note that the program will not allow you to update the Record of Calls for an Individual Questionnaire unless the Household Questionnaire is completed and set as 200.)

Data Processing

Data Editing

Various checks were done, After exiting the Individual Questionnaire, the iPAQ will automatically code the questionnaire as complete (code 400) and display the Select Case screen. If you were not able to complete the Individual Questionnaire, the iPAQ will prompt you to update the Record of Calls with the appropriate result code. (Note that the program will not allow you to update the Record of Calls for an Individual Questionnaire unless the Household Questionnaire is completed and set as 200.)

Other Processing

Every time that you use the iPAQ to conduct an interview or enter a result code in the Case Management System's Record of Calls, the data are stored in the iPAQ's internal memory, much the same as any other type of computer. These data will need to be sent back to the Central Office so that you, your Field Supervisor, and GATS project management staff can use the data to closely monitor data collection efforts.
In addition, transmitting the interview data back to the Central Office protects against data loss, should anything happen to your iPAQ while you are in the field. For these reasons, you must transmit data according to the timetable you have worked out with your Field Supervisor.

To transmit data using SD cards, you will need to:
• export data to the SD card,
• fill out a Material Transmittal Form, and
• send the SD card and Material Transmittal Form to project staff via post, courier, or your Field Supervisor.

Data Appraisal

Estimates of Sampling Error

Since the report is not ready, no sampling error.

The Bureau creates and maintains a National Sampling Survey and Evaluation Programme (NASSEP) household master sampling frame, which provides the framework for designing household surveys to generate different forms of household based data. It has an elaborate infrastructure for data collection, which includes Statistics Offices in all the 47 Counties with trained personne

Other forms of Data Appraisal

Export Data to the SD Card

To export data to the SD card, you will need to perform the following steps:

1. Check to be sure that the SD card is set to the unlock position. When the plastic tab is in the up position, the SD card is unlocked, and data can be exported
onto the card.

2. Insert the SD card into the card expansion slot at the top of the iPAQ. Make sure the card is inserted fully so that the top of the card is flush with the iPAQ.

3. At the Today screen, tap Start, then tap CMS from the dropdown menu.

4. Confirm that the system clock settings are correct, and enter your password to launch the GATS Case Management System program.

Interview and result code data must be sent back to the Central Office so that project management staff can monitor data collection and protect against data loss.
